

SOFTWARE PRESENTATION

Roadmap

Route intelligence for heavy & oversized transport

Check any route against every official German obstacle source, and know exactly where it will pass. In seconds.

A single low bridge can stop a €250,000 transport.

Whether an oversized or heavy transport can actually drive a route depends on data that sits scattered across **dozens of public authorities**, and it changes every single day.

Clearance & weight

One unmarked low bridge or weight-limited crossing means a forced detour, a damaged load, or a blocked convoy.

Constant road works

Thousands of construction sites open and close every week across federal, state and city road networks.

No single source

Autobahn GmbH, 16 federal states and dozens of city portals, each with its own format and update cycle.

Hours

of manual portal-hopping per transport today. No audit trail, no guarantee.

Route clearance today is **manual, fragmented and undocumented.**

- ✗ **Incompatible formats.** GeoJSON, DATEX II, PDF, phone calls. Nothing comparable, nothing combinable.
- ✗ **No direction or time awareness.** A closure on the opposite lane still triggers a false alarm.
- ✗ **No proof.** No documentation for the permit file, and none for liability if something goes wrong.
- ✗ **Single point of failure.** The know-how lives in one experienced dispatcher's head.

THE COST OF A MISS

One overlooked obstacle, real consequences.

- › Forced detours & lost driver hours
- › Fines and damaged loads
- › Delayed or rejected permits
- › No evidence of due diligence

A route in. A verified feasibility report out. In seconds.

Roadmap takes the route you already plan to drive, checks it against every official German obstacle source, and tells you exactly where it will pass and where it will not.

One route. Every obstacle. **At a glance.**

This is exactly what your dispatch sees: a real heavy transport, checked end to end in the browser.

Bremen to Leipzig, 319 km

A wind-turbine blade transport, analysed in a single pass and snapped to the real road network.

8 critical, 2 warning, 4 notice

Every finding severity-graded and pinned exactly where it sits along the route.

Map, dashboard and date timeline

Filter by category, scrub the timeline, export the report. Nothing to install.

Live product • setreo-cloud.com/roadmap

Everything dispatch needs, **in one screen.**

setreo-cloud.com/roadmap

FINDINGS · 7

- CRITICAL**
Clearance 3.80 m, B27 underpass
0133 · km 142 · ↑ direction
- WARNING**
Bridge weight limit 30 t
0150 · km 168 · ↑ direction
- NOTICE**
Lane closure, road works
0131 · km 058 · until

3-way route input

Start and destination, a Maps link or a file. Plus a full waypoint editor.

Dozens of official sources

Autobahn GmbH, the federal Mobilithek, plus state and city portals.

Obstacle engine

Clearance, weight limits, road works, bridges and tunnels, all severity-graded.

Direction & time aware

Opposite-lane and out-of-window obstacles are filtered out automatically.

Court-proof chat

Documented, timestamped discussion on every obstacle, ready for the permit file.

PDF export & share link

Attach to the permit file, or share a live link. The recipient needs no login.

Multi-tenant SaaS

Hosted in Germany

GDPR-compliant

Seat-based licensing

Live source-health monitoring

Planning-grade data

From checking routes to **planning them.**

PLANNED

Approved-transport history

A searchable archive of past approved heavy transports. Reuse corridors that already cleared the authorities as a proven planning basis.

PLANNED

Obstacle-aware route-finding

Not just check a route, generate one. Automatic routing for heavy and oversized loads that avoids known clearance, weight and construction restrictions.

PLANNED

Coverage beyond Germany

Expanding official obstacle data across the DACH region (Austria and Switzerland), then France and further European markets.

PLANNED

Vehicle profiles & permit workflow

Per-vehicle height, weight and axle profiles applied automatically, with export toward the official permit application.

From route to clearance in **three steps.**

1

We provision your tenant

Your team, your seats, your regions. We set the data scope for the areas you drive. Onboarding in days, not months.

2

Dispatch plans a route

Paste a Maps link or enter start and destination. Roadmap checks the route against every monitored source instantly.

3

Export & share

Attach the PDF to the permit file and share a live link with driver or authority. Full audit trail included.

NEXT STEP

A 2-week guided pilot on your real routes.

- ✓ Defined region & data scope
- ✓ Your live transports
- ✓ Success metric agreed up front
